

**NORTEK AUTOMATION Delivers Packaging Line for Electronics Mfr**

Huntington Beach, Calif. - (September 2003) – Nortek Automation Inc. is pleased to announce their latest Packaging Line is in full production at a large, global manufacturer of computer memory and peripheral products. **“The complete line was operational the first day...in full production the second day!”** Production Mgr, PC Card Manufacturer.

The packaging line constructs your retail carton, inserts a pre-packaged electronic circuit board, seals the carton, print/applies labels on the vertical and horizontal carton surface, adheres a hang tab for retail display, and stacks the cartons. The labels contain print on demand information such as product data, customer data/logo, serial numbers, bar codes, 2D, date, batch and mfr/location codes. **“Our mislabeling & re-labeling problems are gone...”** Traceability software insures the carton labels match the product inside. Work order scanning and auto-setup software eliminate operator entry errors. The finished cartons are offloaded in sets of twenty-five for final bulk packaging and shipping. The system is capable of integration with Nortek’s line of Printed Circuit Board (PCB) Handling & Packaging Systems for seamless automated production from PCB to final retail package.

Your circuit board, PC card, flash memory...

...your finished retail package
